

The maximum width of the bottom panel is at the beam, and it's width is about 25 1/4", so you will need at least 60" cloth for this hull!

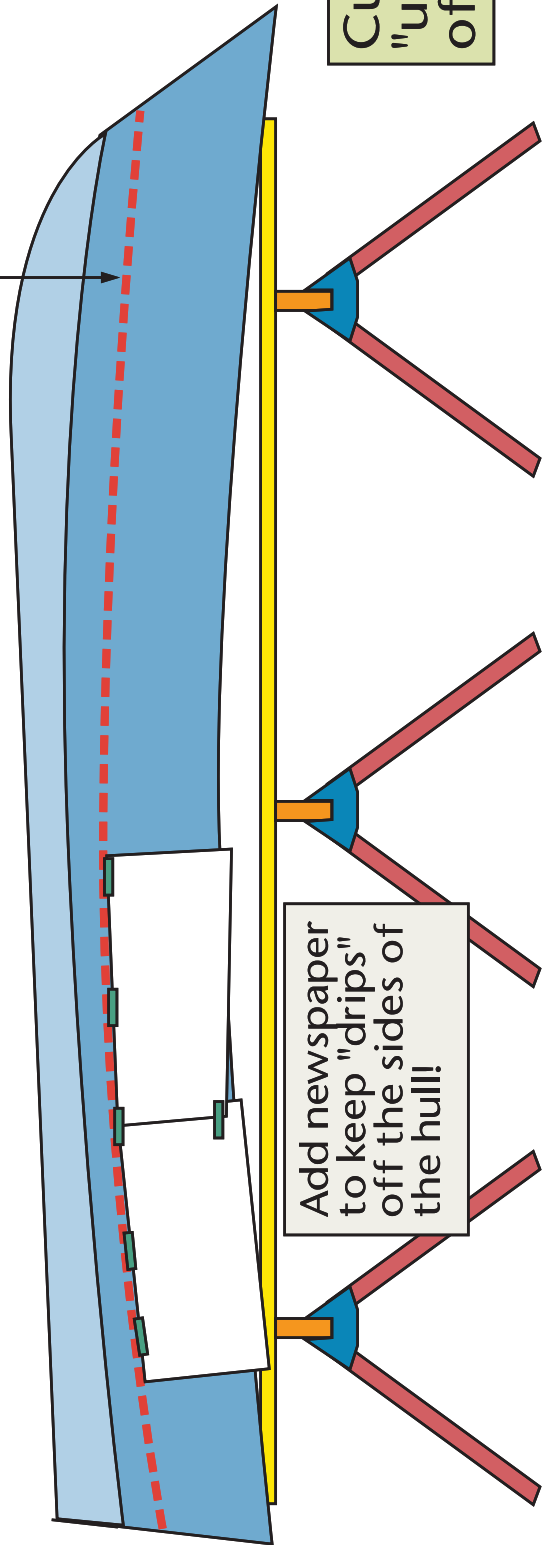

With 60" fiberglass cloth, you will have about 4" of overlap on both sides at the beam

Glass cloth laid and hand smoothed over the hull

Masking tape used as a guide to trim the fiberglass cloth to after wetting out

Cut to the "upper" side of the tape

Add newspaper to keep "drips" off the sides of the hull!
